

Hi, I'm Sophia Bostian[^] I'm a 5 grader
from Butterfly
ridge elementary school. I'm here
to support bill 1450.

This bill is important be-
cause some kids don't
have enough food, while people
are throwing away food from
lunch. Some kids will just
throw away milk and fruit.

In our class we have a
share table for kids who
are still hungry or a snack you
could have later. We also
have a share table at lunch
so if kids want something
they can get it.

Students will have
the opportunity to be more
successful if they don't go hungry
all day.

Students will also
be able to have a

chip bags
any bags
bags
straws
and such
so.

I think composting is important because to take trash to a land fill we have to go all

contains any liquid
has paper, plastic and boxes or Juice boxes but not straws

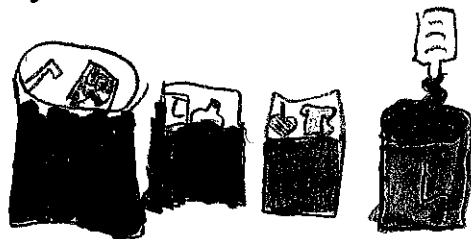

the way to Pennsylvania because our

land fills are completely filled. But if we composted less

contains any food

land fills will be used because plastic will be made in other plastic, food becomes soil and you can put liquid in the sinks!

Chair Kaiser, Vice Chair Washington, and Members of the Ways and Means Committee,

Thank you for the opportunity to testify in support of HB1450.....

My name is Lucy Gauthier and I'm
in fifth grade and I think composting
is an important thing to use.
A lot of the trash in our landfills
are food trash. Composting is
a way to reduce and reuse food
waste. By limiting and reducing
the amount of food waste ^{that} goes
into landfills. This creates a
better environment for everyone.
At bar-t, they are all for environment
like having wind and solar energy
and especially composting!
and it has a very positive effect
on our environment. I think that all

I like composting
because it helps the earth.

I do composting at my
school and it's my favorite
because it helps the
earth.

How do you feel about the compost program at Lincoln and why it is important?

I feel good because it feels good to provide food for others that might not have food or can not pay for food. So all of the milk that we would open and dump out the bottles aren't even getting recycled that's why we now recycle and do composting. So that food that we don't need we give to others so we don't have to throw fresh food away.

How can students in elementary school make a difference and teach parents and their community to start composting?

We can get a lot of people from this school and every Sunday or Saturday make a little stand so if you have food that you will not eat we can take it and donate it or take it to the school and put it in the composting cooler. Then when we make a stand other people will take pictures of the signs and tell other people so they can spread the word.

Do you think other schools should do the same? If so, why?

I think other schools should do composting because then if we make it a big thing this can get on the news and schools around the world would be doing it and then we would save the planet and things like climate change.

How do you feel about the compost program at Lincoln and why it is important? I think it is a good idea to have the compost program because if we don't compost then all of the carbon will go into the oceans and cause extinction to the ocean. Also if we have leftover uneaten food we can give it to those in need of food.

How can students in elementary school make a difference and teach parents and their community to start composting? We can make a composting rule for the county and community where all schools have to compost. For parents we can write a paper to try and convince them and their friends to compost.

Do you think other schools should do the same? If so, why? I think other schools should compost because so much food would go to waste instead of to those who are homeless and have no food. Plus the compost will help the plants suck all the carbon in and help protect ocean wildlife.

Name: Carmen Sulbaran Rojas .

How do you feel about the compost program at Lincoln and why it is important? I feel like it's a really important idea ,because people keep making a big waste while we can compost it and help our planet be a better place for everyone to live in .

How can students in elementary school make a difference and teach parents and their community to start composting?We can all make a difference by realizing that if we compost we can breathe and even fresher air, and the fruits ,and all organic food can be testier ,so we should tell the community that everyone should start composting if we want to make a change .

Do you think other schools should do the same? If so, why?I do think other schools should start doing the same, because it could be an even better change to our planet , because that way more plants are going to get more nutrients and plants/grass is going to grow bigger and healthier .

1:How do you feel about the compost program at Lincoln and why is it important?

2:How can students in elementary school make a difference and teach parents and their community to start composting?

3:Do you think other schools should do the same? If so, why?

1: I feel like the compost program in Lincoln is great because sometimes we don't eat the food and we throw it into the trash. And people like us have no money and have no food. And they need it to live.

2: The students make a difference by saving our world. The world gives us an oxgent. They are helping our world and that makes a difference.

3: Yes, schools should do it. They are helping the world. It helps the plants. And it helps the animals

jessica

1.How do you feel about the compost program at Lincoln and why it is important?

2.How can students in elementary school make a difference and teach parents and their community to start composting?

3.Do you think other schools should do the same? If so, why?

Answer to question 1.: I feel that it is important to have this program so we can save food and not waste it because we can help homeless people and other stuff. Composting according to the video it said that if we start composting more then we could save animals and sea life and stop using greenhouse gass and it is good for humans in general we could put an end to climate change and we could carbon farm.

Students in other schools could try and focus on composting and recycling instead of throwing away everything like plastic bottle's and strat too compost at home. Another thing that people could do is tell other people to recycle and compost to help the world

Yes i think people should start composting so we can make the world a better place for both animals and humans and just everything and everyone that is why i think people should start composting and recycle.

How do you feel about the compost program at Lincoln and why it is important? Because we have over 80,000,000 carbon and that could stop it.

How can students in elementary school make a difference and teach parents and their community to start composting? By going home and telling their mom and dad that they need to start composting and their parents will listen to them.

Do you think other schools should do the same? If so, why? Because if they don't we can't stop climate change and we can save animals like polar bears.

How do you feel about the compost program at Lincoln and why it is important?

It is important because it is saving the environment we live in.

How can students in elementary school make a difference and teach parents and their community to start composting ?they can start composting so other people can start doing the same.

Do you think other schools should do the same? If so, why?

Yes because it is good for the environment.

Name: Kiara Alicia Funes Date:2/26/20

How do you feel about the compost program at Lincoln and why it is important?

Well I think that composting would really help the soil and suck up all the carbon. From the air. Where did that all come from in the first place? Well it came from us so we need to stop. Because if more carbon is going in the air, it is also failing in the sea and killing fish.

How can students in elementary school make a difference and teach parents and their community to start composting?

Well we students could teach our parents that we need this or this world would go done. We teach them that if too much carbon is in the ocean that will kill fish and make it sick. Then we can't eat it or we get sick. Then they would have to listen and make a change.

Do you think other schools should do the same? If so, why?

Of course other schools should do the same if all of us do we have the same system again like back then. Also we all can help the cause then everyone is helping and then we got to our goal. Then our world will be better than ever.

How do you feel about the compost program at Lincoln and why it is important?

1. One reason I think it is important to compost it is because it will make a change in the world. It will make plants grow. Also it will save the planet.

How can students in elementary school make a difference and teach parents and their community to start composting?

2. You can make a difference to parents or people out of school by composting at home so that you can show people how to compost.

Do you think other schools should do the same? If so, why

3. I think other schools should do the same because it is good for the world and more than one school should compost.

How do you feel about the compost program at Lincoln and why it is important?

How can students in elementary school make a difference and teach parents and their community to start composting?

Do you think other schools should do the same? If so, why?

1. I think the Composting program at Lincoln is amazing because it makes a change and saves the planet. When you compost, it is so much better for the planet. So compost and change the world!
2. Students can teach others and teachers to make a change by being an influencer\ role model. When you are a role model people will look up to you. So, they will see that you are composting and see the change and realize it is AMAZING.
3. I do think other schools should compost because like I said before it makes a huge change. Don't just think of it as another trash can. Think of it as another lifestyle. You will change the world! YOU will

How do you feel about the compost program at Lincoln and why it is important?

I Feel like composting is a great part of Lincoln elementary School because it can stop climate change, increase healthy soil, and produce more life.

How can students in elementary school make a difference and teach parents and their community to start composting?

Even though we are just kids that do not change anything, we can still make a difference we can encourage kids all over the world to compost and save the world.

Do you think other schools should do the same? If so, why

I think that other schools should start composting and the more we all do this together we can reverse climate change

How do you feel about the compost program at Lincoln and why it is important? I feel good about it because it will help the homeless and help the world

How can students in elementary school make a difference and teach parents and their community to start composting? They can make a difference by telling their parents and showing them and if we all do it we will make a change

Do you think other schools should do the same? If so, why? I think that more schools should start to do this because help all the other schools compost

How do you feel about the compost program at Lincoln and why it is important? I feel good that we do compost at our school. I think composting is important because that will help our soil and ocean life also climate and the polar bear.

How can students in elementary school make a difference and teach parents and their community to start composting? Students can help their parents and their Community to not throw trash in the recycling bin. And throw it in the green bin if you don't have one ask your city so they can give you one.

Do you think other schools should do the same? If so, why? yes I think the other school should do the same because people need soil and also we need different type of climate also we need more ocean life because ocean animals are dying

Testimony of students from Christian
Before the House Ways and Means Committee

In Support of HB1450
Education - Food Waste Grant Program - Established

Chair Kaiser, Vice Chair Washington, and Members of the Ways and Means Committee,

Thank you for the opportunity to testify in support of HB1450.....

I think that compost is important cuz helps the Earth be clean. if you throw plastic anywhere or other type of trash it can hurt animals, that in the water or outside anywhere so it's good to compost so stuff can not go to waste and you might can use it again. that why compost is important.

Food waste is a problem because we are going to run out of food and that's what I think food waste is a problem and people won't have no food to eat.

How do you feel about the compost program at Lincoln and why it is important?

How can students in elementary school make a difference and teach parents and their community to start composting?

Do you think other schools should do the same? If so, why?

I feel good and it's important because it will mabe stop global warming and helps animals too

By making people start doing it by seeing us do it.

Yes because it's important because it gets rid of carbon. And homeless people can eat that food
