**Re: SB0348 The Conservation Finance Act**

Dear Senator Elfreth, Delegate Love, and Delegate Boyce:

The Lyme Timber Company LP is a private timberland investment manager that focuses on the acquisition and sustainable management of lands with unique conservation values. Our portfolio includes approximately 1.5 million acres throughout the United States. Lyme Timber Advisory Services, a separate consulting arm of the company, has been engaged by the Environmental Policy Innovation Center to help offer a practitioner's perspective on SB0348 The Conservation Finance Act (CFA).

Conservation investing—intentional investments in companies, funds, and organizations with the goal of generating both a financial return and a measurable environmental result—is growing dramatically. In just two years, the total private capital committed to conservation investments jumped by 62%, to a total committed private capital of \$8.2 billion.<sup>1</sup> It is not a lack of capital holding back conservation investing. Public policy has a critical role to play in unlocking the

potential for conservation investing - bolstering demand, improving transaction efficiency and reducing risk.

Our analysis of the CFA suggests that the proposed legislation strengthens these enabling conditions and would attract significantly more private investment capital for conservation in Maryland. The following memo summarizes the most important ways the CFA, if enacted, would be likely to trigger higher levels of investment.

### **Bolstering demand**

Government policy can encourage private investment by signaling consistent and dependable demand for conservation outcomes. By authorizing Pay-for-Success as a competitive procurement practice, the CFA creates the opportunity for the state to buy completed environmental outcomes. If private investors perceive the state as a predictable buyer of environmental commodities, they will start investing in the delivery of water quality and similar outcomes in advance of the state's need.

### **Improving transaction efficiency**

Overly high transaction costs are a significant barrier in preventing private investment in public goods.<sup>2</sup> The CFA seeks to improve transaction efficiency in a number of ways. By defining "environmental outcome" as a commodity, it creates a way for agencies to use commodity or supply contracting authorities, which should dramatically simplify the paperwork needed for them. The legislation encourages the formation of public/private partnerships to aggregate projects for carbon market offset sales. Given the importance of scale for successful carbon development projects, aggregation is critical to reducing transaction costs. The Green and Blue Infrastructure Policy Advisory Commission recommended by the CFA is, among other things, tasked with identifying overlapping areas of state and local procedures that could be simplified to make restoration easier. Similarly, the working group on carbon offset sales is charged with reducing barriers for Maryland landowners to participate in growing carbon markets.

### **Reducing Risk**

Publicly funded mechanisms that reduce risk have the potential to leverage significant private capital.<sup>3</sup> The CFA proposes changes to the state revolving funds for drinking water and clean water to clarify all the ways these funds can be used for source water protection. These

federally-backed programs provide very low interest rate financing (typically less than 2% and down to 0% for certain projects) that has largely been used for traditional water infrastructure. Out of the \$2.5 billion provided over the last 20 years in Maryland, only \$130 million has gone toward green infrastructure. State revolving funds have been critical to large conservation efforts in other states because they reduce risk to private partners by offering them access to concessionary rate financing. For example, Lyme accessed financing from Pennsylvania's clean water revolving loan fund to acquire 67,500 acres of timberland in northwest Pennsylvania. In addition to managing the timberland sustainably, Lyme donated a conservation easement on 9,400 acres and agreed to fund \$75,000 of acid mine drainage remediation work.

Maryland has committed significant public financial resources toward safeguarding the Chesapeake Bay. However, public funding is limited and will be stretched even further to keep up with the growing need in the current economic environment. Markets that encourage conservation and support ecosystem functions on private lands are critical to protecting the Bay and safeguarding natural resources and community health throughout Maryland. We think the changes proposed in the CFA will help Maryland become a leader in the region – and perhaps the country - in attracting private conservation dollars. Maryland would be the first state in the country to introduce comprehensive legislation like this and we hope others will follow its lead.

A handwritten signature in black ink, appearing to read "Peter R. Sten". The signature is fluid and cursive, with a prominent initial "P" and a long, sweeping underline.

Sincerely,

Managing Director  
The Lyme Timber Company LP
