HB1317

I know from my experience of standing in front of planned parenthood offering women alternatives to abortion over a period that is now almost 5 years, that women are not being properly informed as to what actually will take place during an abortion. The sonogram results are hidden from them. They are lied to as to the actual development of the child that is to be aborted. I have had women tell me that they did not think about what was to actually happen and then after the realization of what had occurred, they have grieved for years afterward describing to me how the sound of the abortionist's vacuum and even worse the sound of the babies remains plopping into the catch basin resonates in their head as if it had just happened even many years afterward. The fact that when a woman is unsure of what she wants to do and planned parenthood uses the mind control technique of putting a mifepristone pill on her hand and ordering her to take it before it melts on her hand demonstrates that pressure rather than informed consent takes place at the planned parenthood.

Please recommend passage of this bill.
