**HB1147 - Environment - Playground Surfacing Materials - Prohibitions**  
**Senate Committee on Education, Energy and the Environment**  
**March 26, 2024**  
**Position: FAVORABLE**

Good afternoon, Chair Feldman, Vice Chair Kagan, and honorable members of the committee,

Thank you for this opportunity to submit written testimony concerning an important priority of the **Montgomery County Women's Democratic Club (WDC)** for the 2024 legislative session. WDC is one of Maryland's largest and most active Democratic clubs with hundreds of politically active members, including many elected officials.

**WDC strongly urges this committee to support HB1147.** By setting clear toxicity standards for our playgrounds, this bill protects children from exposure to two dangerous, toxic chemicals: Lead, a neurotoxin, and per- and polyfluoroalkyl substances (PFAS).

Many Maryland playgrounds are covered with synthetic materials, typically used tires processed into [poured-in-place](#) (PIP) surfaces, or loose tire chunks or mulch. Children, and especially younger children, are uniquely vulnerable to the health effects of toxic environmental exposures, with routes of exposure through ingestion, inhalation or dermal uptake. Today there is [undeniable proof](#), including from the [premier research institutions on children's environmental health](#), that tires contain multiple [toxic chemicals](#), all acting together on each child who visits a playground: carcinogens, heavy metals and endocrine disruptors, in addition to microplastic contamination.

**Lead:** The [Centers for Disease Control and Prevention](#) and the [World Health Organization](#) confirm there is no safe level of lead exposure. Even relatively low levels of lead exposure that were previously considered 'safe' have been shown to damage children's health and impair their cognitive development. And at high levels [lead poisoning can be fatal](#). The only [solution to lead poisoning is prevention](#). HB1147 moves us significantly toward that goal. Maryland-area jurisdictions have struggled after community-initiated testing found high lead levels in local playgrounds and schools, including in [Montgomery County](#), [Prince George's County](#), and [Washington, D.C.](#) Another leading study concludes that "the presence of a high number of harmful compounds, frequently at high or extremely high levels, in these recycled rubber materials [means they] should be carefully controlled, and their final use should be [restricted or even prohibited in some cases](#)."

**PFAS:** The over 12,000 PFAS used today have been linked to a wide range of health problems in animal and human studies including [kidney and testicular cancer](#), [hormone and endocrine disruption](#), [liver and thyroid](#) problems, [reduced vaccine effectiveness](#), reproductive

harm and abnormal fetal development. As the science has evolved, EPA-issued health advisories reflect findings that they are more toxic at lower levels than scientists previously knew.

By enacting HB1147, Maryland can secure safer playgrounds, healthier children, and a healthier environment. **WDC respectfully urges a favorable report for HB1147.**
